July 27, 2021

Dear Francisco,

On behalf of this year's organizing committee, we are grateful for your participation as a **Volunteer** on our first [LatinX in CV Research Workshop](#) co-located with the 2021 Conference on Computer Vision and Pattern Recognition (CVPR). Our workshop took place on Saturday, June 19th, 2021 which was held virtually in response to COVID-19 concerns.

The 2021 Conference on Computer Vision and Pattern Recognition (CVPR) is the premier annual computer vision event. The conference is extraordinarily interdisciplinary, with contributions from many intellectual communities united by an interest in the study of artificial and computer vision.

Having a dual track of presentations and high-quality poster and demonstration sessions encourages interdisciplinary interactions. Presentation topics include image recognition, object detection, image segmentation, and visual search.

Our workshop was a one-day event with invited speakers, oral presentations, and posters. The event brings together faculty, graduate students, research scientists, and engineers for an opportunity to connect and exchange ideas. There was a panel discussion and a mentoring session to discuss current research trends and career choices in artificial intelligence and computer vision and pattern recognition.

If additional documentation is needed for any reason, you may contact the board of the LatinX in AI by emailing board@latinxinai.org.

Sincerely,

A handwritten signature in cursive script that reads 'Laura Montoya'.
